Informed Consent Form for Testosterone Therapy

This form refers to the use of testosterone by persons in the female-to-male spectrum who wish to become more masculine to reduce gender dysphoria and facilitate a more masculine gender presentation. While there are risks associated with taking testosterone, when appropriately prescribed it can greatly improve mental health and quality of life.

You are asked to initial the statements on this form to show that you understand the benefits, risks, and changes that may occur from taking testosterone. If you have any questions or concerns about the information below, please talk with the people involved in your care so you can make fully informed decisions about your treatment. It is your right to seek another opinion if you want additional perspective on any aspect of your care.

Please initial and date each statement.

Masculinizing Effects

Patient  Provider  Date

1. _____   ______   __/__/__  I understand that testosterone may be prescribed to reduce female physical characteristics and masculinize my body.

2. _____   ______   __/__/__  I understand that the masculinizing effects of testosterone can take several months or longer to become noticeable, that the rate and degree of change can’t be predicted, and that changes may not be complete for 2-5 years after I start testosterone.

3. _____   ______   __/__/__  I understand that the following changes will likely be permanent even if I stop taking testosterone:
   • Lower voice pitch (i.e., voice becoming deeper).
   • Increased growth of hair, with thicker/coarser hairs, on arms, legs, chest, back, and abdomen.
   • Gradual growth of moustache/beard hair.
   • Hair loss at the temples and crown of the head, with the possibility of becoming completely bald.
   • Genital changes may or may not be permanent if testosterone is stopped. These include clitoral growth (typically 1-3 cm) and vaginal dryness.

4. _____   ______   __/__/__  I understand that the following changes are usually not permanent (that is, they will likely reverse if I stop taking testosterone):
   • Acne, which may be severe and can cause permanent scarring if not treated.
   • Fat may redistribute to a more masculine pattern (decreased on buttocks/hips/thighs, increased in abdomen – changing from “pear shape” to “apple shape”).
   • Increased muscle mass and upper body strength.
   • Increased libido (sex drive).
   • Menstrual periods typically stop within 1-6 months of starting testosterone.
5. _____ _____ ___/___/___ I understand that it is not known what the effects of testosterone are on fertility. I have been informed that even if I stop taking testosterone I may or may not be able to get pregnant in the future. I understand that even after testosterone stops my menstrual periods it may still be possible for me to get pregnant, and I am aware of birth control options (if applicable). I have been informed that I can’t take testosterone if I am pregnant.

6. _____ _____ ___/___/___ I understand that there are some aspects of my body that will not be changed by testosterone:

   • Breasts may appear slightly smaller due to fat loss, but will not substantially shrink.
   • Although voice pitch will likely drop, other aspects of speech will not become more masculine.

Although testosterone does not change these features, there are other treatments that may be helpful. If there are any concerns about these issues, referrals can be provided to help explore treatment options.

**Risks of Testosterone**

7. _____ _____ ___/___/___ I understand that the medical effects and safety of testosterone are not fully understood, and that there may be long-term risks that are not yet known.

8. _____ _____ ___/___/___ I understand that I am strongly advised not to take more testosterone than I am prescribed, as this increases health risks. I have been informed that taking more than I am prescribed will not make masculinization happen more quickly or increase the degree of change: extra testosterone can be converted to estrogen, which may slow or stop masculinization.

9. _____ _____ ___/___/___ I understand that testosterone can cause changes that increase my risk of heart disease, including:

   • decreasing good cholesterol (HDL) and increasing bad cholesterol (LDL)
   • increasing blood pressure
   • increasing deposits of fat around my internal organs

   _____ _____ ___/___/___ I have been advised that my risks of heart disease are greater if people in my family have had heart disease, if I am overweight, or if I smoke.

   _____ _____ ___/___/___ I have been advised that heart health checkups, including monitoring of my weight and cholesterol levels, should be done periodically as long as I am taking testosterone.

10. _____ _____ ___/___/___ I understand that testosterone can damage the liver, possibly leading to liver disease. I have been advised that I should be monitored for possible liver damage as long as I am taking testosterone.
11. _____ ______ __/__/__ I understand that testosterone can increase the red blood cells and hemoglobin, and while the increase is usually only to a normal male range (which does not pose health risks), a high increase can cause potentially life-threatening problems such as stroke and heart attack. I have been advised that my blood should be monitored periodically while I am taking testosterone.

12. _____ ______ __/__/__ I understand that taking testosterone can increase my risk for diabetes by decreasing my body’s response to insulin, causing weight gain, and increasing deposits of fat around my internal organs. I have been advised that my fasting blood glucose should be monitored periodically while I am taking testosterone.

13. _____ ______ __/__/__ I understand that testosterone can be converted to estrogen by various tissues in my body, and that it is not known whether this increases the risks of ovarian cancer, breast cancer, or uterine cancer.

14. _____ ______ __/__/__ I understand that taking testosterone can lead to my cervix and the walls of my vagina becoming more fragile, and that this can lead to tears or abrasions that increase the risk of sexually transmitted infections (including HIV) if I have vaginal sex – no matter what the gender of my partner is. I have been advised that frank discussion with my clinician about my sexual practices can help determine how best to prevent and monitor for sexually transmitted infections.

15. _____ ______ __/__/__ I have been informed that testosterone can cause headaches or migraines. I understand that if I am frequently having headaches or migraines, or the pain is unusually severe, it is recommended that I talk with my health care provider.

16. _____ ______ __/__/__ I understand that testosterone can cause emotional changes, including increased irritability, frustration, and anger. I have been advised that my clinician can assist me in finding resources to explore and cope with these changes.

17. _____ ______ __/__/__ I understand that testosterone will result in changes that will be noticeable by other people, and that some transgender people in similar circumstances have experienced harassment, discrimination, and violence, while others have lost support of loved ones. I have been advised that my clinician can assist me in finding advocacy and support resources.

18. _____ ______ __/__/__ I understand that Testosterone is now known to increase the risk of Venous Thrombo-Embolism, including Deep Vein Thrombosis (DVT) and Pulmonary Embolism (PE). I understand that this is more likely to occur if I use Tobacco, and may be more likely to occur if I have family members with such problems.
Prevention of Medical Complications

Patient   Provider   Date

19. _____ _____  __/__/__   I agree to take testosterone as prescribed and to tell my clinician if I am not happy with the treatment or am experiencing any problems.

20. _____ _____  __/__/__   I understand that the right dose or type of medication prescribed for me may not be the same as for someone else.

21. _____ _____  __/__/__   I understand that physical examinations and blood tests are needed on a regular basis to check for negative side effects of testosterone.

22. _____ _____  __/__/__   I understand that testosterone can interact with other medication (including other sources of hormones), dietary supplements, herbs, alcohol, and street drugs. I understand that being honest with my clinician about what else I am taking will help prevent medical complications that could be life-threatening. I have been informed that I will continue to get medical care no matter what information I share.

23. _____ _____  __/__/__   I understand that some medical conditions make it dangerous to take testosterone. I agree that if my clinician suspects I may have one of these conditions, I will be checked for it before the decision to start or continue testosterone is made.

24. _____ _____  __/__/__   I understand that I can choose to stop taking testosterone at any time, and that it is advised that I do this with the help of my clinician to make sure there are no negative reactions to stopping. I understand that my clinician may suggest I reduce or stop taking testosterone if there are severe side effects or health risks that can’t be controlled.
My signature below confirms that:

- My clinician has talked with me about the benefits and risks of testosterone, the possible or likely consequences of hormone therapy, and potential alternative treatment options.
- I understand the risks that may be involved.
- I understand that this form covers known effects and risks and that there may be long-term effects or risks that are not yet known.
- I have had sufficient opportunity to discuss treatment options with my clinician. All of my questions have been answered to my satisfaction.
- I believe I have adequate knowledge on which to base informed consent to the provision of testosterone therapy.

Based on this:

_____ I wish to begin taking testosterone.

_____ I do not wish to begin taking testosterone at this time.

*Whatever your current decision is, please talk with your clinician any time you have questions, concerns, or want to re-evaluate your options.*
